6.S974/2.S988/1.S980 – Games, Learning, and Security
Fall 2026

Wargame Deliverable 1, Due: October 6, 2026

Saurabh Amin, Mathieu Dahan, Asuman Özdağlar, Themistoklis Sapsis

Model and Research Questions

Submit one proposal per team, up to **3 pages excluding references**, with your project title and team members. The purpose is to establish a concrete starting point for your wargame and receive feedback before developing your prototype. Your proposal should include the following:

a) **Setting and model.** Briefly describe the system you will study and the strategic interaction that motivates your project. Formulate an initial game model specifying the agents, their objectives, available actions and resource constraints, information available when making decisions, and sequence of play. Define the system state, how it evolves, and how payoffs are determined. Use mathematical notation where appropriate, and identify your main simplifying assumptions.

b) **Relevant literature.** Identify 2–3 relevant papers and provide complete references. For each, briefly explain what you plan to draw from it—for example, a model, solution method, or experimental setup—and how your proposed wargame differs. Where possible, identify a source describing how decisions are currently made in your application.

c) **Research questions.** State 2–3 specific questions you intend to investigate. For each, explain what strategies, scenarios, or system designs you would compare and which outcomes you would measure. Identify at least one simple benchmark policy against which you will evaluate more sophisticated strategies.

d) **Plan and feedback.** Outline what you intend to implement and analyze by Workshop 1, including a small initial instance of your game. Briefly indicate how the project could incorporate learning, attacks and defenses, and resilient design. Identify the main unresolved modeling choice or feasibility concern on which you would like feedback.

Your model and questions may evolve as the project develops; the priority at this stage is a clear, focused, and feasible proposal.
